Climate Collection

MEMORY FOAM PILLOWS MATTRESSES & TOPPERS

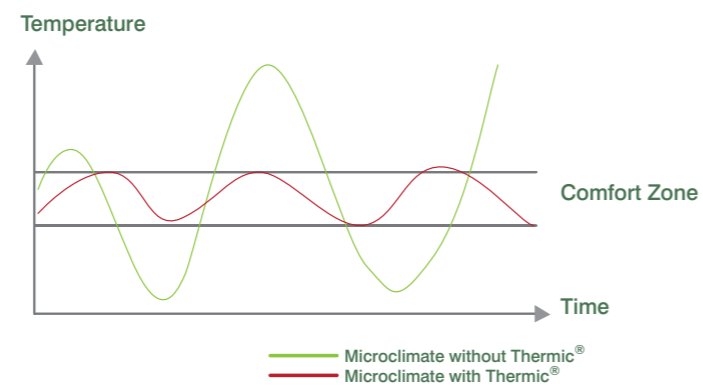

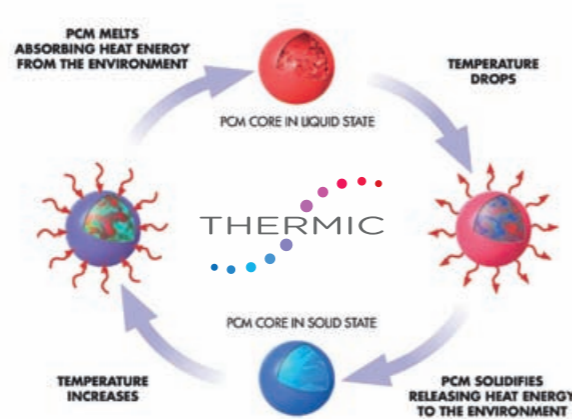

Welcome to the new and innovative Climate Collection, a range of mattresses, toppers and pillows designed to keep you in your Comfort Zone for longer as you sleep.

To wake up feeling healthy and refreshed, ready to tackle the challenges of the day ahead, it has long been proven that a good night's sleep is a must. One of the factors that can affect sleep patterns is temperature – being too cold or too hot induces movement and restless sleeping, causing us to be tired in the morning.

The Climate Collection is a new range of mattresses and pillows coated with Thermic®, a patented thermo-regulating technology, using reactive micro-capsules which contain a phase change material.

The Thermic® layer responds to changes in temperature by absorbing, storing and releasing heat to keep the micro-climate temperature (the temperature close to the skin) within a comfort zone of 28-30°C for longer than standard products.

The new Climate Collection is much more effective in keeping the temperature within the Comfort Zone. It's not just about being cool to the touch and preventing people from over heating and sweating, it's also about maintaining warmth for comfort and an undisturbed nights sleep.

Climate Collection

Climate 21 Mattress

The deluxe 5 zone contoured mattress is manufactured using a high density base foam for medium support. It has dual layers of luxurious memory foam, the middle layer profiled with air holes for active air technology. The top layer is coated with Thermic® to keep the temperature within the Comfort Zone. Thermic® is a special coating which absorbs heat and releases heat when the temperature of the microclimate (the temperature close to the skin) is above the comfort zone and releases heat if it drops below 28°C. The quilted look cover has a fabulous soft feel with the Climate Collection logo.

Climate Collection

Climate 23 Mattress

The deluxe 5 zone contoured mattress is manufactured using a high density base foam for medium support. The middle offers a sumptuous layer of soft zoned memory foam for personalised support. The top of the mattress is a firmer deluxe layer of memory foam featuring air holes in a 5 zone design for active airflow technology, coated with Thermic®. The firmer memory foam allows the body to gently sink into the softer memory foam for comforting support. Thermic® is a special coating which absorbs heat and releases heat when the temperature of the microclimate (the temperature close to the skin) is above the comfort zone and releases heat if it drops below 28°C. The quilted look cover has a fabulous soft feel with the Climate Collection logo. A mattress to give a cosy, comfy individual night's sleep.

Climate 25 Mattress

Our premium 5 zone contoured high density foam base offers firmer support. The mattress has a luxurious layer of soft zoned memory foam in the middle and a unique feeling high density memory foam on the top surface. The top layer has air holes in a 7 zone design for active airflow technology and is coated with Thermic®. The top layer moulds to your body shape and lets you gently sink into the softer middle layer of memory foam offering personalised comfort. Thermic® is a special coating which absorbs heat and releases heat when the temperature of the microclimate (the temperature close to the skin) is above the comfort zone and releases heat if it drops below 28°C. The quilted look cover has a fabulous soft feel with the Climate Collection logo. This mattress is for those that want the ultimate night's sleep.

All our mattress covers can be treated with Purotex, a treatment which reduces allergens.

Mattress Toppers

The sleep better range of mattress toppers leads the way in design and comfort, combining the latest technology of Thermic® on the memory foam with innovative covers and fitted sheets. The toppers offer the ultimate in comfort and support and are specifically designed to ensure the even distribution of body weight, for a more comfortable night's sleep. Zoned areas with different profiles, featuring air holes for active air technology and contoured cut toppers which offer softness and flexibility, all add to the uniqueness of the range. The addition of Thermic® on the top surface, which can be applied to all the toppers in the range, helps to keep you in your Comfort Zone for longer as you sleep.

Our mattress topper collection are supplied with a fitted sheet or a cover, which is washable.

Pillows

sleep better pillows use the latest designs and materials to create the perfect pillow range and are now offered with a layer of Thermic® on the sleeping surface. Thermic® is a phase change material which absorbs and stores heat when the temperature of the microclimate (the temperature close to your skin) is above the Comfort Zone and releases when the temperature drops keeping you in the comfort zone for longer – an unique addition to the collection.

The range includes traditional, contoured and anatomically styled pillows designed to create perfect alignment between the spine, neck and head. The pillows are made from memory foam or a combination of premium micro-fibre and memory foam and are finished with either cotton or polyester covers.
